

Age Of Token Quest

WHITEPAPER FOR DUMMIES

Everything You Need To Know
Explained In Simple Words

WHAT IS AGE OF TOKEN QUEST?

Age Of Token Quest (\$ATQ) is a **revolutionary ecosystem** that mixes the strategy of classic games like Risk and Age of Empires with the exciting world of cryptocurrency!

It's like being able to run your own virtual country while working towards **financial freedom**. You can buy, trade, and vote, being in charge of these digital countries, just like in real life, but this time **you have the power**.

Take Back Control of Your Freedom!

Users can make money, trade stuff, and even expand their territories. The ecosystem is all about bringing the power back to you, **protecting freedom from tyranny**, and working together to **protect your future** in a digital world that lets its individuals call the shots.

Help Us Keep Democracy Safe and
Become Part of The Future of Finance!

WHAT'S MESSING THINGS UP?

In today's world, a lot of **people feel left out and without much power** or say in big decisions, especially when it comes to **rules about money and how countries are run**, in a world constantly disappointed by **politics, oppression and corruption**.

Plus, even though playing games can be fun, they usually don't help you in real life, like **making money** or learning how things really work.

ENOUGH IS ENOUGH! IT'S TIME TO TAKE A SWING AT THE SYSTEM

Age Of Token Quest makes it possible for users to interact in an ecosystem where their **virtual decisions have real benefits**.

Imagine buying and trading **digital tokens that represent countries**. This way, you can have a say in how these virtual places **grow economically**, make deals, and form alliances.

It's like a simulated world that **mimics how economies work**, but you can also **make real money** from it. As you get better at trading goods, planning military moves, and working with or against others, investing in crypto in **an immersive and interactive ecosystem never seen before!**

HOW WE SEE THE WORLD

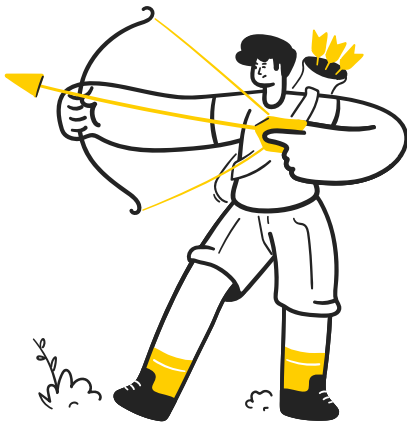

We imagine a future where it is possible to interact, invest and decide together, without the burden of **authoritarian governments** and **corrupt financial institutions**.

It's all about **Prosperity, Liberty and Democracy**, being smart with your strategy, and discovering more about **what drives you** and others in an interactive but rewarding way.

We want to make a place where **you can win big** by understanding and navigating the complexities of human nature and strategy.

WHAT WE WANT TO DO ABOUT IT

Our aim is to create a unique ecosystem giving everyone the chance to **participate in the decision making process** and **gain financial freedom**.

An ecosystem where your strategic decisions can directly influence **real financial outcomes**, empower **genuine democratic engagement**, and stir the excitement of forming alliances and navigating challenges.

Our goal is to reveal a world brimming with **new opportunities**, powering a **financial revolution** without the need of **traditional and oppressive politics**.

It's all about **Bringing the Power Back to You**.

WHAT'S THE BIG IDEA?

\$ATQ isn't just any digital money; it's the key to everything in the Age Of Token Quest world. Think of it as the main tool you need to interact and grow.

You start by using \$ATQ to buy virtual countries. As things get more interesting, you can use \$ATQ to trade for all sorts of stuff that your country needs to get ahead, like resources and goods.

But \$ATQ isn't only about buying and trading. It's also how you build your own army to defend your space, take over new areas, and team up or face off with others. It's all about strategy, just like in real-life conflicts and alliances. The more you use \$ATQ, the more you're involved in shaping how this whole digital world works and grows, just like being part of a living, breathing economy.

THE BIG TECH BEHIND ATQ

The whole Age Of Token Quest universe is built on some really advanced blockchain tech. This tech is chosen because it's super scalable (meaning it can grow a lot without problems), secure, and flexible.

With smart contracts (kind of like digital agreements that run themselves) every deal or trade you make, every alliance you form, and even your army's moves are all recorded in a way that's clear and can't be changed.

These smart contracts are also behind the scenes, making sure everything from trading goods to counting votes in elections happens like it's supposed to, without any funny business.

This solid tech foundation means that \$ATQ can handle a ton of different transactions and operations, all without breaking a sweat. It's what makes the whole system work smoothly, allowing for a really complex digital economy where everyone can get involved, make moves, and see the impact of their actions in real-time.

HOW IS IT POSSIBLE?

The setup of the Age Of Token Quest ecosystem is like a giant, multi-layered world that mirrors how real economies and strategy games like 'Risk' and 'Age of Empires' work.

Here's a breakdown:

Layer 01

This is where everything starts. \$ATQ tokens are handed out and first used here. It's the basic level of the ecosystem, your currency to start choosing territories according to your preference and strategy.

Layer 02

Now things get more interesting. You can swap your \$ATQ tokens for country tokens. These aren't just any tokens; they represent virtual countries that you can swap between each other as some countries gain or lose value, adding a whole new level of strategy and personal identity to the mix.

Layer 03

This layer digs deeper into the global economy. Here, you trade in commodities essential for your country's growth. It's all about managing economic challenges and grabbing opportunities, just like real world countries do.

Layer 04

The final layer is all about military power. This is where you build up your armies and form alliances. It's the peak of the game's strategy, letting you defend your territory or expand it by interacting with other players in more complex ways.

ONE TOKEN TO RULE THEM ALL

In paying homage to the classic games that set the stage for deep strategic and civilization-building experiences, Age Of Token Quest blends the excitement of 'Risk' with the rich historical layers of 'Age of Empires'. The ATQ token stands as a symbol for a global citizen, with its total number reflecting the world's population in 1997, the year 'Age of Empires' first launched and captured the hearts of aspiring rulers everywhere.

By choosing this specific number, 5,896,000,000, Age Of Token Quest aims to celebrate the dreams and ambitions of people all around the globe, echoing the spirit and passion of that era, while also shielding your investment from inflation as it is not possible to create more ATQ tokens, unlike paper money which is constantly printed out of thin air, our token is based on people and will always focus on protecting your investment.

HOW ARE TOKENS DISTRIBUTED?

The way \$ATQ tokens are shared out is carefully thought out to help the project grow and last a long time.

It all starts with the Initial Coin Offering (ICO), which is like the grand opening event where early birds can grab their tokens and get involved right from the start.

A big chunk of the tokens is set aside as rewards for the community. This is to encourage people stick with the project and grow their investment as the ecosystem develops and thrives.

Another piece is kept for building and improving the project and to give a little thank you to the team and advisors who dreamt up and are steering this whole adventure.

This way of splitting up the tokens makes sure everyone's goals are lined up, from the brains behind the operation and the people building it, to the early backers and those who are active in the community.

WHAT DO I GET BY HOLDING ATQ?

Owning \$ATQ tokens isn't just about having a piece of digital currency; it's packed with benefits to make you want to stick around and get involved. First off, you get a say in how things are run. This isn't just about making decisions; it's a big part of keeping everything open and fair, staying true to the idea of everyone having a voice. Then, by locking up (staking) your tokens, you're not just helping keep the network safe; you're also earning rewards, kind of like earning interest, giving you a nice passive way to make more from what you've already got.

As more people join in and the ways you can use \$ATQ grow, the value of your tokens will go up too. So, by hanging onto your tokens, you're part of a system that rewards you for being actively involved, gives you a say in the project's direction, and even see the value of your investment grow over time. This powerful combo is a big reason for people to buy into \$ATQ and stay engaged with the project.

HOW DOES IT LOOK LIKE IN NUMBERS?

TOKEN NAME	AGE OF TOKEN QUEST
Token symbol	\$ATQ
Presale Starting Price	\$ 0.0025

TOTAL SUPPLY	5,896,000,000	PERCENTAGE
Presale	2,948,000,000	50%
Exchange Listings	1,474,000,000	25%
Team's Tokens	589,600,000	10%
Staking Rewards	471,680,000	8%
Collaborations	176,880,000	3%
Partners & Advisors	117,920,000	2%
Legals	117,920,000	2%

HOW ARE THE ICO STAGES DIVIDED?

STAGE	TOKENS	PERCENTAGE
Stage 1	442,200,000	15%
Stage 2	442,200,000	15%
Stage 3	442,200,000	15%
Stage 4	442,200,000	15%
Stage 5	442,200,000	15%
Stage 6	442,200,000	15%
Stage 7	294,800,000	10%

THE ROADMAP

Our roadmap lays out a careful plan to bring the Age Of Token Quest world to life, step by step.

First up is the Initial Coin Offering (ICO), which is all about getting the funds we need and building a community of the first people to get on board. After the ICO, we roll up our sleeves for the development phase. This is when we set up the core blockchain stuff, mint the first \$ATQ tokens, and get them into the hands of our early backers.

Then, we move on to introducing Layer 2: Country Tokens. We'll create tokens that represent virtual countries. This lets players start shaping their strategies and allowing early backers to be the first ones to choose their territories. It's also when we start setting up the economy, paving the way for even cooler interactions down the line.

Next up, Layer 3: Commodity Markets. Here, we focus on bringing in commodity tokens. These tokens stand for all sorts of resources and goods that countries will need and trade with each other, which is key to the ecosystem's economy. Allowing country holders to vote on the selection of the national commodity.

Finally, we hit Layer 4: Military Strategies. This last stage in our initial plan adds military units to the mix. Countries can now defend themselves, plan their moves, and maybe even start conflicts or form alliances, just like in the strategy games we love. All by voting among holders of each digital nation.

Each of these steps is designed to build on the last, making sure \$ATQ's world is as rich and engaging as possible.

LET'S EMBARK ON THIS JOURNEY!
